TOXICOLOGY

VOLUME CONTENTS

Volume 73 (1992)

Review Article
The carcinogenicity of ciclosporin
by B. Ryffel (Zurich, Switzerland) 1–22

Comparative study on the toxicity of methyl linoleate-9,10-ozonide and cumene hydroperoxide to alveolar macrophages (**Using phagocytosis as a parameter of cell viability the former is more toxic and acts by a different mechanism than the latter**)
by R.A. Hempenius, I.M.C.M. Rietjens, H.N.A. Grooten, J. de Vries (Wageningen and Heerlen, The Netherlands) 23–34

Dose-related inhibition of brain and plasma cholinesterase in neonatal and adult rats following sublethal organophosphate exposures (**Inhibitory activity on brain or plasma cholinesterase is correlated with an index of acute toxicity**)
by C.N. Pope and T.K. Chakraborti (Monroe, LA) 35–43

N-Methyl-*N'*-Nitro-*N*-Nitrosoguanidine: The effect on migration and cGMP level of neutrophils (**The compound has two effects: increase in cGMP and enhancement of migration**)
by J.G.R. Elferink and B.M. de Koster (Leiden, The Netherlands) 45–52

Toxicity of 2,3,7,8-tetrabromodibenzo-*p*-dioxin in rats after single oral administration (**2,3,7,8-TBDD seems to be less potent than 2,3,7,8-TCDD**)
by I.A. Ivens, E. Löser, M. Rinke, U. Schmidt and M. Neupert (Leverkusen, Germany) 53–69

In vitro protein synthesis is affected by the herbicide 2,4-dichlorophenoxyacetic acid in *Azospirillum brasilense* (**It is concluded that 2,4,-D acts through the same mechanisms in procaryotic and eucaryotic cells**)
by V. Rivarola, A. Fabra, G. Mori and H. Balegno (Córdoba, Argentina) 71–79

Susceptible period for the teratogenicity of di-*n*-butyltin dichloride in rats (**The teratogenic potential of di-*n*-butyltin is described**)
by M. Ema, T. Itami and H. Kawasaki (Osaka, Japan) 81–92

Stimulative effects of cadmium on bone resorption in neonatal parietal bone resorption (**Cadmium-stimulated bone resorption was dependent on production of prostaglandin E_2**)
by T. Miyahara, M. Takata, S. Mori-Uchi, M. Miyata, M. Nagai, A. Sugure, M. Matsusista, H. Kozuka and S. Kuze (Toyama, Japan) 93–99

On the hepatotoxicity of 1,1,2,2-tetrachloroethane (**Spin trapping suggests the involvement of free radicals and lipid peroxidation as toxic mechanism**)
by M. Paolini, E. Sapigni, R. Mesirca, G.F. Pedulli, F.P. Corongiu, M.A. Dessi and G. Cantelli-Forti (Bologna and Cagliari, Italy; Galveston, TX) 101–115

Role of aluminium in skin reactions after diphtheria-tetanus-pertussis-poliomyelitis vaccination: An experimental study in rabbits (**Aluminium seems to remain at the cuticular injection site**)
by A. Pineau, C. Durand, O. Guillard, B. Bureau and J.-F. Stalder (Nantes and Poitiers, France) 117–125

Review Article
Lead nephrotoxicity and associated disorders: biochemical mechanisms (**The hypothesis is discussed that lead nephropathy is caused by antagonism between lead and calcium**)
by C.V. Nolan and Z.A. Shaikh (Kingston, RI) 127–146

Cytochrome *P*-450- and glutathione-associated enzyme activities in freshly isolated enriched lung cell fractions from β-naphthoflavone-treated male F344 rats **(Multiple rat lung cell types contain constitutive *P*-450 monooxygenase activities)**
by S.A. Lacy, J.B. Mangum and J.I. Everitt (Research Triangle Park, NC) 147–160

Ranking toxicity of industrial dusts by bronchoalveolar lavage fluid analysis **(Some biochemical parameters in bronchoalveolar lavage fluid are affected by dusts in the following order: quartz > fly ash > mica > corundum)**
by R. Bajpai, M. Waseem, G.S.D. Gupta and J.L. Kaw (Lucknow, India) 161–167

Blood lactate and catecholamine levels in the carbon monoxide-exposed rat: the response to elevated glucose **(No relationship between CO-induced raise in blood catecholamines and a rise in blood glucose was found)**
by B.B. Sutariya, D.G. Penney, J.C. Dunbar and C.J. Swanson (Detriot, MI) 169–178

Protective effect of diosmetin on in vitro cell membrane damage and oxidative stress in cultured rat hepatocytes **(There is a moderate reduction of enzyme leakage after erythromycin and a strong protection against GSH loss after oxidative stress)**
by P. Villa, D. Cova, L. De Francesco, A. Guaitani, G. Palladini and R. Perego (Milan, Italy) .. 179–189

Toxicity assessment of toxins T-514 and T-544 of buckthorn (*Karwinskia humboldtiana*) in primary skin and liver cell cultures **(Hepatocyte cultures were more sensitive than keratinocyte cultures)**
by L. Garza-Ocañas, G.C. Hsieh, D. Acosta, O. Torres-Alanís and A. Piñeyro-López (Nuevo León, México; Austin, TX) 191–201

Fluoranthene induces programmed cell death and alters growth of immature B cell populations in bone marrow cultures **(Fluoranthrene compromises B lymphopoiesis at several levels)**
by F. Hinoshita, J.A. Hardin and D.H. Sherr (Boston, MA) 203–218

Inhibitory effect of lead on the release of tissue plasminogen activator from human vascular endothelial cells in culture **(Lead decreases the release of tissue plasminogen activator without concomitant nonspecific inhibition of protein synthesis)**
by T. Kaji, C. Yamamoto, M. Sakamoto and H. Kozuka (Kanazawa and Toyama, Japan) 219–227

Depletion of essential elements by calcium disodium EDTA treatment in the dog **(EDTA treatment results in increased urinary excretion of Zn, Cu and Mn, decrease of Zn levels in duodenum, skin and hair and increase in renal Cu)**
by S.E.M. Ibim, J. Trotman, P.I. Musey and W.E.B. Semafuko (Tuskegee, AL) 229–237

The hepatotoxicity of chloroform in precision-cut rat liver slices **(Glutathione depletion was an early sign of toxicity, seen as early as after 3 h)**
by S. Azri-Meehan, H.P. Mata, A.J. Gandolfi and K. Brendel (Tucson, AZ)..... 239–250

Methylamine metabolism to formaldehyde by vascular semicarbazide-sensitive amine oxidase **(Overproductoin of formaldehyde in vascular tissue may be a pathogenetic mechanism)**
by P.J. Boor, M.B. Trent, G.A. Lyles, M. Tao and G.A.S. Ansari (Galveston, TX; Dundee, UK). 251–258

Toxicity assessment of toxins T-514 and T-544 of Buckthorn (*Karwinskia humboldtiana*) in primary skin and liver cell cultures **(Liver cells were highly sensitive to the two toxins, whereas skin toxicity was less severe and delayed)**
by L. Garza-Ocañas, G.C. Hsieh, D. Acosta, O. Torres-Alanís and A. Piñeyro-López (Nuevo León, México; Austin, TX) 259–267

Actin filament alteration as a potential marker for cholestasis: a study in isolated rat hepatocyte couplets **(Pericanalicular F-actin abnormalities may be indicative of hepatocellular cholestasis)**
by N. Thibault, J.R. Claude and F. Ballet (Vitry sur Seine Cedex and Paris, France) 269–279

Formation and identification of protein adducts to cytosolic proteins in guinea pig liver slices exposed to halothane **(Cytosolic proteins are trifluoroacetylated and adduct formation was selective for glutathione-*S*-transferase)**
by A.P. Brown, K.L. Hastings, A.J. Gandolfi, D.C. Liebler and K. Brendel (Tucson, AZ) 281–295

Inhibition of protein synthesis in liver and kidney of mice by bolesatine: mechanistic approaches to the mode of action at the molecular level **(The fungal mycotoxin does not seem to belong to the ribosome-inactivating proteins)**
by O. Kretz, L. Barbieri, E.E. Creppy and G. Dirheimer (Strasbourg and Bordeaux, France; Bologna, Italy) 297–304

Host resistance to *Trichinella spiralis* infection in rats and mice: species-dependent effects of cyclophosphamide exposure **(Rats appear to be inherently more sensitive to cyclophosphamide than are mice)**
by R.W. Luebke, C.B. Copeland, D.L. Andrews, M.M. Riddle and R.J. Smialowicz (Research Triangle Park, NC) 305–321
Announcements 323–324
Contents of journals relating to Toxicology 325–332
Subject Index Volume 73 333–336
